

HOW TO BE A WILDLIFE LANDLORD

Join Peoples Trust for Endangered Species and Arla farmers in their mission to nurture and protect wildlife and biodiversity.

Many Arla farmers partake in local conservation projects to nurture biodiversity and protect the vulnerable species living around their farm, as part of the Arla C.A.R.E programme.

Join PTES and Arla farmers in their mission to protect wildlife, wherever possible, by exploring conservation projects in your local areas. Whether taking part in a wildlife survey, making changes in your garden or green space, or joining a river clean up, we all have the power to make a positive impact for wildlife.

1 GET PLANTING!

On the farm: Over half of the species associated with hedgerows are dependent on hedgerow trees. Protecting hedgerows is just one possible action that sits under the Ecosystem element of our Arla C.A.R.E programme.

In your garden: Whilst you may not have space for a big hedgerow oak tree, try planting fruit trees or flowers for pollinators for wildlife to enjoy and thrive.

2 GET TRIMMING!

On the farm: Arla farmers are encouraged to cut their hedgerows on rotation, so there is an abundance of blossom for pollinators.

In your garden: Trim your garden hedges and trees a few centimetres higher and wider each year, so you always have fresh young growth to flower and fruit too!

3 GET A WILDLIFE CORRIDOR!

On the farm: Many Arla farmers have been planting new hedgerows, a crucial habitat for species like hedgehogs, which have declined by 50% since the millennium.

In your garden: Hedgehogs travel around one mile every night; by cutting holes in our garden fences, we can connect gardens and give hedgehogs the space they need to roam.

4 GET WILD!

On the farm: Hedges protect the roots of the shrubs and trees and can be filled with herbs, and wildflowers, which serve as valuable habitat for wildlife.

In your garden: Get outdoors and welcome wildflowers into your garden or terrace to support the wide range of insects that rely on these nectar-rich flowers.

5 GET INVOLVED!

On the farm: Many Arla farmers partake in conservation projects to support and nurture wildlife on farm and locally.

In your garden: Join us in our mission to protect wildlife wherever possible by exploring conservation projects in your local areas or cultivating your garden - ptes.org/my-garden
